# ACCOYA

Beautiful wooden siding

Accoya wood siding combines the natural beauty of wood with exceptional stability and durability.

Whether you're envisioning a classic facade or a contemporary design, Accoya wood siding opens up a realm of possibilities, ensuring that your exterior exudes the perfect balance of beauty and resilience.

QUALITY WHERE IT COUNTS

## PERFORMANCE

that saves you time and money

When it comes to outdoor siding, durability is paramount. With Accoya wood siding, you can trust in its unparalleled resilience against harsh weather conditions. Unlike traditional wood options, Accoya wood resists degradation from fungi and other biological agents, ensuring it maintains its integrity throughout its lifespan. This means fewer worries and potential issues, making Accoya wood the smart and enduring choice for superior performance

50 YEAR

DURABLE

LOW  
MAINTENANCE

## FINISH

that stands the test of time

Explore our wide array of finishes, from shou-sugi-ban to custom plank sizes and fixing systems, enabling you to align with your unique vision. Without additional finishing treatment, your wooden siding will naturally develop a patina over time. Alternatively, if you choose to apply a finishing product, Accoya wood offers an ideal surface for this purpose.

Tried and tested

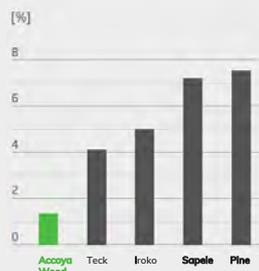

# IDEAL FOR COATINGS

Unlimited possibilities for creativity

The dimensional stability (resistance to swelling and shrinking) of Accoya wood exceeds that of all commonly used wood species, including teak, sapele and iroko. Accoya wood has been tested for extended periods in all weathers - above ground, in the ground and even in water. These tests have proven that it withstands even the harshest conditions.

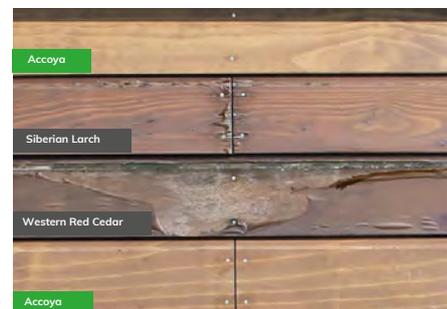

Independent testing shows that Accoya has low rates of warping and shrinkage, unlike other commonly used woods.

Accoya is suitable for coverings which, thanks to its dimensional stability, have a much longer lifespan and require less maintenance than other typical wood species.

Below; coatings manufacturer TEKNOS compared coatings on different wood species in a 10-year trial. Accoya coatings are significantly better than those of other wood species.

# UNMATCHED STABILITY

for generations to come

# NATURALLY BEAUTIFUL

exceptional aging

The durability (resistance to rot) of Accoya wood is Class 1, exceeding commonly used cladding woods such as Western Red Cedar, Larch, Douglas, tropical hardwoods and thermally modified woods. Each batch of Accoya wood is analyzed in the laboratory after production to guarantee its performance.

See for yourself; In our 20-year canal lining durability tests, the results are remarkable.

Accoya Wood

Non Accoya wood

Accoya wood is subject to external conditions. All materials exposed to external conditions are degraded through a series of chemical, biological and physical processes.

The surface of all wood is attacked by a combination of UV, non-wood fungi, algae, mold, yeast and pollution. Untreated Accoya wood will age a beautiful silver gray over time (depending on location and weather conditions).
